978-760-9295 | rileyk2x@gmail.com | linkedin.com/in/rileysmith32

SUMMARY

Creative and analytically minded AI Product Manager with a background in physics and a passion for asking “*why?*” in order to build systems that work smarter from the ground up. Experienced in architecting end-to-end AI automation solutions that not only solve immediate bottlenecks but redesign workflows to address root inefficiencies. Combines systems-level thinking with hands-on understanding of LLMs, automation platforms, and user workflows to deliver solutions that intelligently tackle complex problems.

SKILLS

Programming Languages: Python (SciPy, Matplotlib, Pandas, Scikit-learn), SQL, LaTeX

Tools: Linear, Trello, Jira, MCP, DataGrip, Retool, Figma, Fullstory, Netsuite, Workday, Excel, Jupyter Notebook, Spyder

Certifications: Excel, SQL (Udemy 2025) ; Financial & Valuation Modeling, Accounting & Financial Statement Analysis (WS Prep 2025)

Core Strengths: Proactive, adaptable, curious, inventive

EXPERIENCE

AI Product Manager | Vorto

June 2025 - December 2025

Agentic Workflow Automation Platform Design

- Collaborated with engineering and operations teams to translate business needs into technical solutions by building out Vorto’s proprietary automation platform
- Gathered user feedback to guide continuous platform improvements, minimizing technical friction and empowering non-technical users to build complex automations

Agentic Workflow Automation Platform Ownership

- Diagnosed architectural flaws and collaborated directly with developers to resolve them
- Led automation enablement initiative by hosting office hours, teaching non-technical users platform fundamentals, scalable logic, and debugging skills

Billing & Financial Operations Automation

- Architected and delivered AI-driven automations end-to-end by analyzing existing workflows and re-engineering processes from the ground up
- Designed resilient systems that replaced 150+ hours of weekly manual procedures, addressing complex and nuanced edge cases that previously required human oversight

Carrier Onboarding Redesign

- Partnered with domain experts to map out cross-functional compliance & onboarding procedures across multiple business lines
- Redesigned onboarding workflow from first principles, eliminating information gaps and improving cross-department coordination

Nucor Operational Overhaul

- Doubled the key operational KPI (turn rate) for Nucor, a major steel supplier, by overhauling processes to enable deployment of a machine learning solution

Physics Researcher | University of Colorado Boulder

December 2023 - January 2025

Event Display for PET Scan Development

- Designed and built an interactive event display in Python to support R&D of next generation PET scan machines
- Collaborated across hardware & software teams to define interfaces & functional requirements
- Transformed complex experimental data into accessible, decision-ready insights

Numerical Computation of Spectral Zeta Functions

- Designed a Python-based computational framework for modeling quantum systems using spectral zeta functions
- Turned abstract theoretical goals into clear development milestones and communicable results

EDUCATION

Colorado School of Mines / University of Colorado Boulder

August 2021 - May 2023 / August 2023 - May 2025

B.A. Physics with Distinction

- GPA: 3.9
- President’s Scholarship, Society of Physics Students, Snowboarding Team

Relevant Coursework: Data Science, Design Principles, Particle Physics, Advanced Lab, Principles of Economics
